### 5 simple steps to root your Phone and Install Cyanogenmod

1. Execute the unrevoked script
2. install RomManager
3. Backup !
4. Download and install Cyanogenmod from within RomManager
5. Have fun ! ;)

### The first thing you gotta do is to root your Device.

I've done this the simplest way it can be done ! ;) by using the unrevoked script. <http://unrevoked.com/>

If you're under Windows you need the USB Drivers first : <http://unrevoked.com/recovery/android-usb-driver.zip>

then download the script <http://unrevoked.com/recovery/> and execute it.

(You must run it as root or with Administrator Privileges !)

After that you should have a custom Recovery System installed on your Desire.

The ClockworkMod Recovery to be exact. In my opinion the best available Recovery Mod.

With this new Recovery System you can now install Custom Roms.

Either by downloading the Roms as zip files from the appropriate Sites and selecting them within the Recovery System ,

or by installing RomManager on your Android Device.

I recommend installing RomManger ! Installing and testing Roms has never been that easy ! ;)

Just download and install RomManger from the Android Market.

Once installed the first thing you should do is to make a backup of your current system !!

After that hit "download custom Rom" and have fun.

Cyanogemod Support is nativly integrated in RomManager !

You can even let it check automaticly for updates of your Rom !

It can't be done easier than that !

Over and Out !
